FAB-42 IS ONLINE

```
FAB-42 > power ......... OK
FAB-42 > lasers ........ OK
FAB-42 > software ...... NOT FOUND
```

In a cleanroom so clean that even the dust must wear a hairnet, Dr. Ångström has just switched on FAB-42, the world's first nanofabricator.

It doesn't print, carve or mill anything. It creates matter with laser light, one hexagonal cell at a time.

It is the most precise machine ever built. Right now, it can't do a single thing, because nobody has written its software yet.

That's where you come in.
Start at the very beginning: teach FAB-42 what its own board looks like.

Dr. Ångström and Professor Flux shared a lab once. Once.

Level 1

- The board of a nanofabricator is a hexagon with hexagonal cells
- You are given a list of radii
- For each **radius**, print the **character representation** of the board

```
3
```

```
---*-*-*-*---
--*-0-0-0-*--
-*-0-0-0-0-*-
*-0-0-0-0-0-*
-*-0-0-0-0-*-
--*-0-0-0-*--
---*-*-*-*---
```

Graphic representation

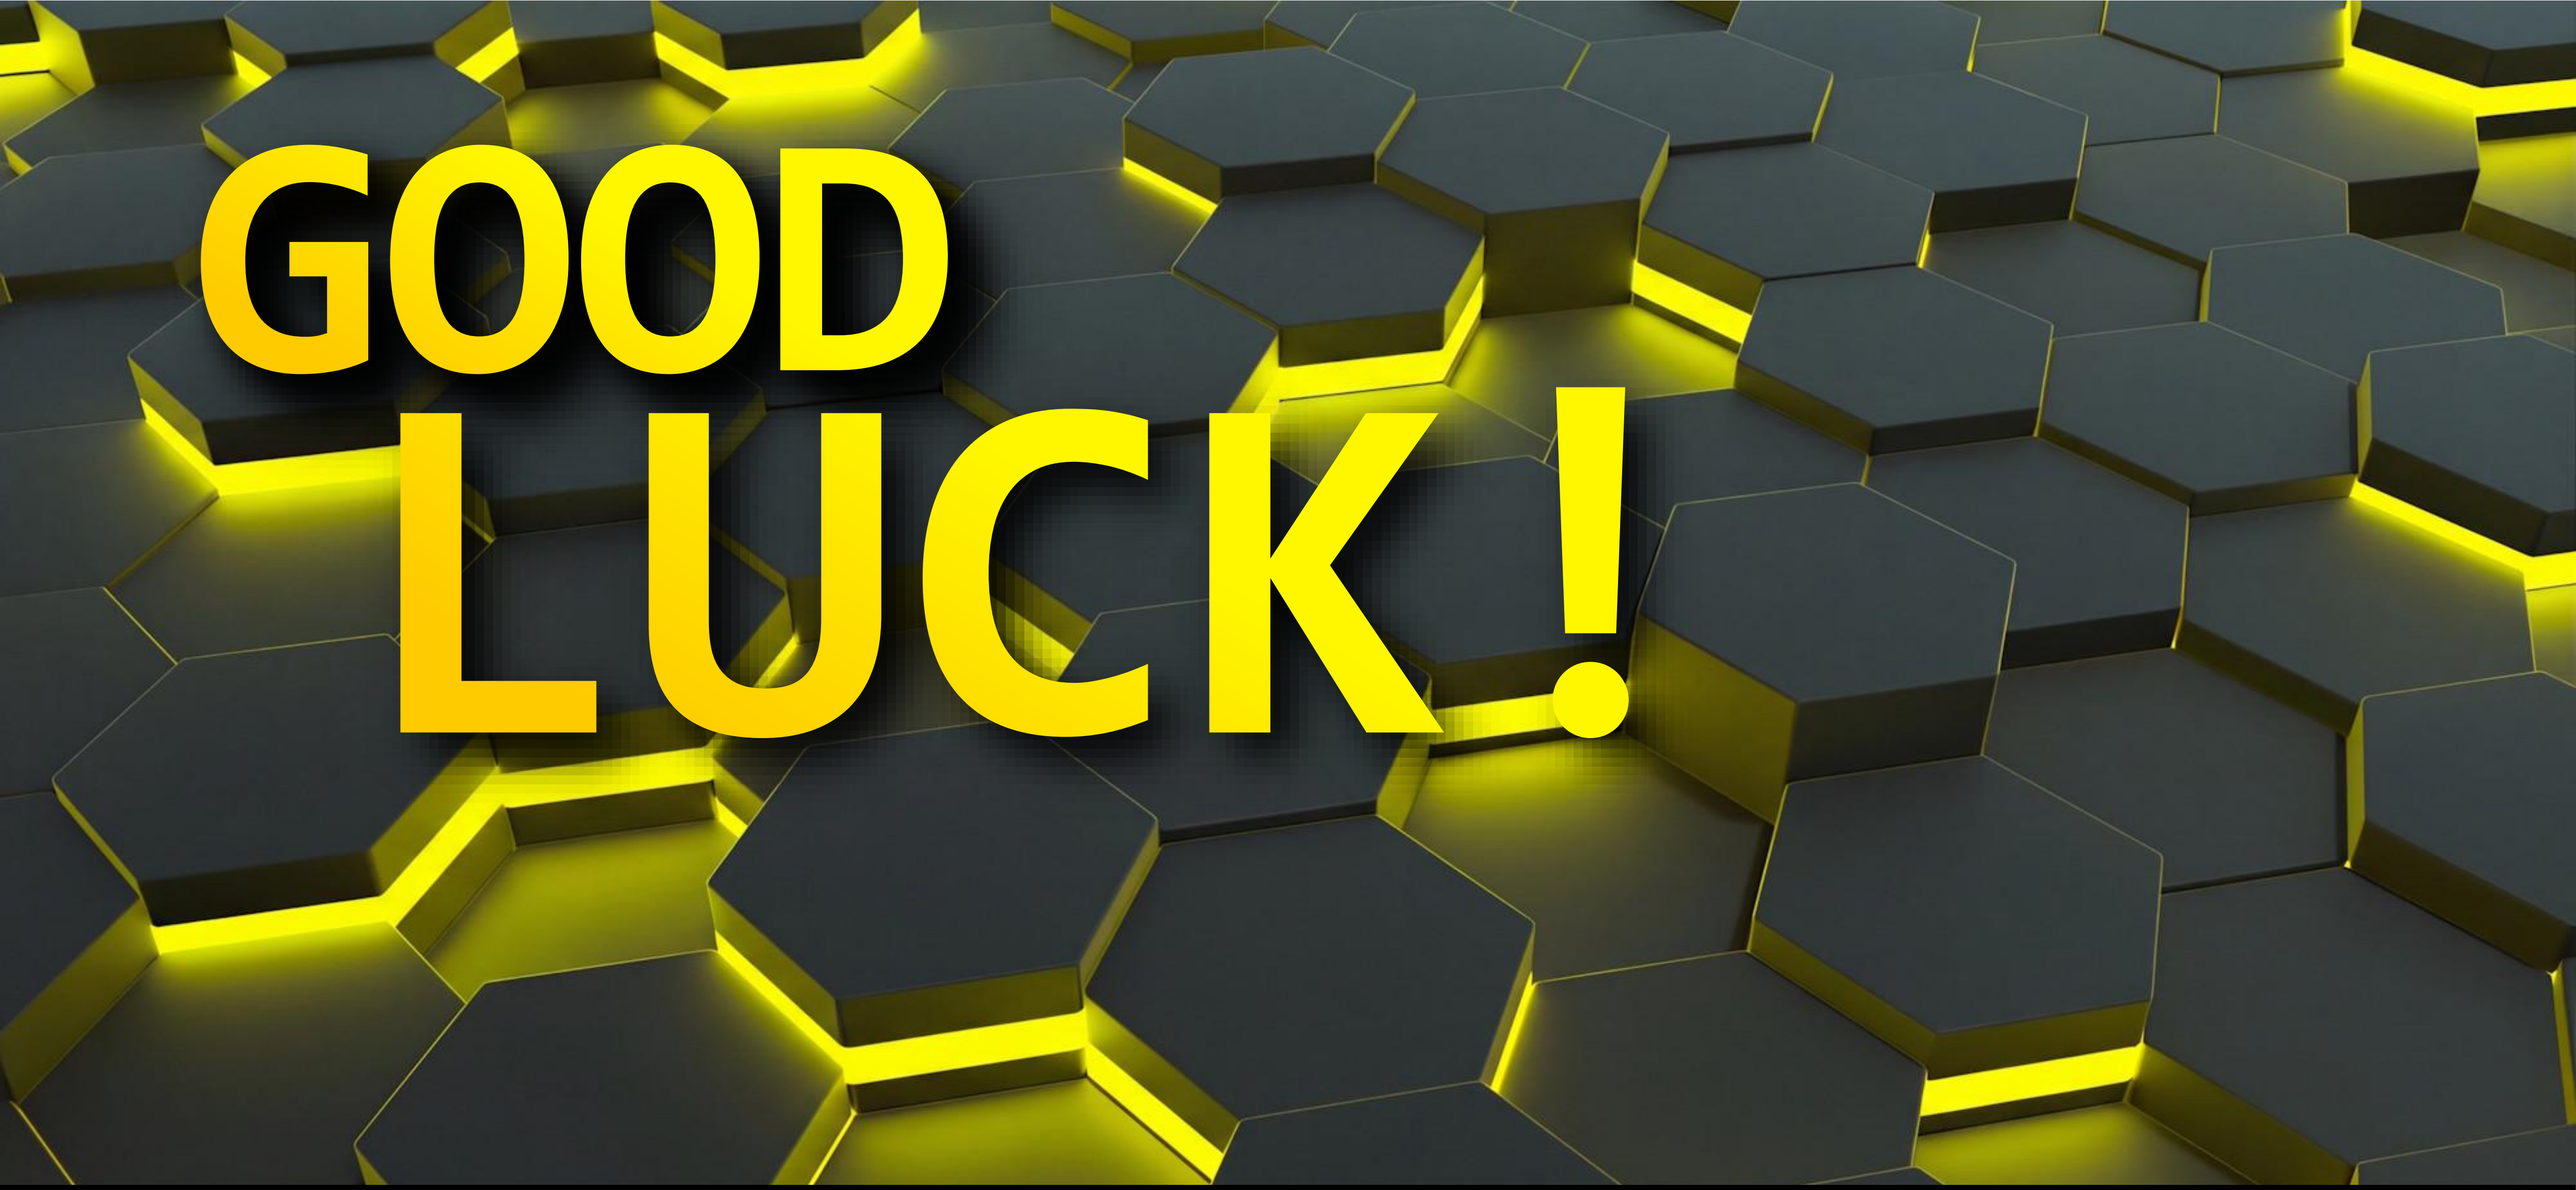

Input

Name	Description	Example
N	Number of radii	3 3 6 4
Radius (repeated N times)	An integer representing the radius of the board	

Output

Name		Description	Example
repeated N times	Board	A paragraph of characters ‘O’ represents a cell of the board ‘*’ represents the border of the board ‘-’ is only necessary for the indentation	---*-*-*-*--- --*-0-0-0-*-- -*-0-0-0-0-*- *-0-0-0-0-0-* -*-0-0-0-0-*- --*-0-0-0-*-- ---*-*-*-*--- ------*-*-*-*-*-*-*------ -----*-0-0-0-0-0-0-*----- ----*-0-0-0-0-0-0-0-*---- ...
	Mandatory empty line between boards		

For each input file, determine the output and write it in a file.
Upload your output file to the coding contest platform.
